

“EVS RC-EVOLUTION”

The race collar has EVOLved. Introducing the new EVS RC-EVOLUTION race collar system. Providing the ultimate in neck protection, the RC-EVOLUTION has been designed from its inception with the assistance of top orthopaedic professionals to reduce neck compression and extension related injuries (the cause of serious spinal chord damage).

The RC- EVOLUTION has a customizable ergonomic fit that works with the rider to ensure comfort and maximum impact protection. Reducing overall weight and bulk, the vented design allows air to move freely through it, helping to keep you cool. Why does the EVS RC-EVO do this better than other braces out there?

The EVS RC-EVO offers more effective load transfer to the shoulders, and deals with filling the space between helmet and shoulders more effectively than other devices. It avoids putting unnecessary pressures on the upper body in otherwise benign crashes. Other benefits of the RC-EVOLUTION includes it's simplicity of use, the adjustability, the lower weight, lower bulk.

Stay in one piece this year while doing it in comfort and in style with the EVS RC-EVOLUTION
